

AI SALES EMPLOYEE

Product Vision & Core Capabilities

An AI employee designed to help Nigerian businesses turn customer conversations into sales while automating repetitive business operations.

V1 Objective

Build a reliable AI sales employee that communicates with customers, qualifies leads, recovers lost sales, supports orders, and gives business owners clear intelligence about what is happening in their business.

1. Customer Conversations

- Answer customers 24/7.
- Understand natural Nigerian English.
- Eventually understand Nigerian Pidgin, Yoruba, Igbo and Hausa.
- Handle text, voice notes and images.
- Remember relevant customer history.
- Maintain natural, useful conversations.

2. AI Sales Agent

- Ask customers what they need.
- Understand budget and preferences.
- Recommend suitable products/services.
- Explain product differences.
- Answer price, size, availability and delivery questions.
- Handle common objections.
- Suggest alternatives.
- Detect genuine buying intent.

3. Lead Management

- Classify leads as HOT, WARM or COLD.
- Identify high-intent customers.
- Alert staff when a lead needs human attention.

4. Follow-Up

- Remember customers who say they will return.
- Automatically follow up with interested customers.
- Allow businesses to control timing, frequency and tone.

5. Lost-Sale Recovery

- Identify customers who asked about a product but did not buy.
- Recover abandoned orders and conversations.
- Track recovered opportunities.

6. Product Knowledge

- Upload products, prices, sizes, colours, stock, images, descriptions, policies and delivery information.
- Answer only from approved business information.
- Never invent prices or availability.

7. Payments

- Send approved payment instructions or links.
- Confirm payment through payment-provider records rather than screenshots alone.
- Connect verified payments to orders.
- Generate receipts where supported.

8. Order Management

- Create orders after confirmed purchases.
- Track order status.
- Connect orders to customers and payments.

9. Inventory

- Track available stock.
- Prevent promises about unavailable products.
- Alert businesses about low stock and repeated demand for unavailable items.

10. Delivery

- Collect delivery information.
- Support delivery-fee calculation where integrations allow.
- Create delivery requests and communicate status.

11. Human Takeover

- Escalate refunds, complaints, unusual requests and low-confidence situations.
- Let staff take over instantly.
- Allow staff to return the conversation to AI.

12. AI Safety

- No invented prices, stock or policies.
- No unauthorized discounts or refunds.
- No unsupported delivery promises.
- Use confidence thresholds and human escalation.
- Keep an audit trail of important AI actions.

13. Customer Database

- Create customer profiles with contact information, orders, conversations, preferences and lead status.
- Build useful customer history across interactions.

14. Cross-Platform Communication

- Long-term support for WhatsApp, Instagram, TikTok, websites and voice.
- Unify customer identity across channels where technically and legally possible.

15. AI Business Intelligence

- Summarize daily activity.
- Explain why customers did not buy.
- Identify common objections and demand patterns.
- Show leads, conversations, orders and revenue trends.

16. Sales Forecasting

- Identify demand patterns.
- Highlight products with rising interest.
- Suggest inventory or sales actions based on business data.
- Clearly distinguish recommendations from guarantees.

17. Marketing Assistant

- Generate campaign ideas, captions, WhatsApp broadcasts and ad copy.
- Suggest relevant customer segments for campaigns.

18. Customer Segmentation

- Identify first-time, repeat, VIP, high-value and inactive customers.
- Segment customers by interests and purchase history.

19. Voice AI

- Eventually handle inbound calls and voice conversations.
- Understand natural Nigerian speech and voice notes.
- Use human escalation when confidence is low.

20. Nigerian Commerce Intelligence

- Understand expressions such as “Abeg how much?”, “How much last?”, “Reduce am”, “Send account”, and “You get XL?”
- Interpret the commercial intent behind local conversational patterns rather than simply translating them.

V1 — FIRST 10 CAPABILITIES

1	AI customer conversations
2	Product/catalogue knowledge
3	AI sales agent
4	Lead detection
5	Automatic follow-up
6	Lost-sale recovery
7	Payment integration
8	Order management
9	Human takeover
10	Business analytics

PRODUCT VISION

We are not building another chatbot. We are building an AI employee that handles repetitive customer, sales and operational work while keeping humans in control of important decisions.

Long-term: an AI employee for Nigerian businesses that can communicate, sell, follow up, support business workflows and explain what is happening in the business.

Prototype focus: Customer conversation → Lead qualification → Follow-up → Payment → Order → Business intelligence.
